COPYRIGHT AND RESTRICTIONS

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted materials. The various state privacy acts govern the use of materials that document private individuals, groups, and corporations.

Under certain conditions specified in the law, libraries and archives are authorized to furnish a reproduction if the document does not infringe the privacy rights of an individual, group, or corporation. These specified conditions of authorized use include:

- non-commercial and non-profit study, scholarship, or research, or teaching
- criticism, commentary, or news reporting
- as a NPS preservation or security copy
- as a research copy for deposit in another institution

If a user later uses a copy or reproduction for purposes in excess of "fair use," the user may be personally liable for copyright, privacy, or publicity infringement. This institution's permission to obtain a photographic, xerographic, digital, or other copy of a document doesn't indicate permission to publish, exhibit, perform, reproduce, sell, distribute, or prepare derivative works from this document without first obtaining permission from the copyright holder and from any private individual, group, or corporation shown or otherwise recorded.

Permission to publish, exhibit, perform, reproduce, prepare derivative works from, sell, or otherwise distribute the item must be obtained by the user separately in writing from the holder of the original copyright(or if the creator is dead from his/her heirs) as well as from any individual(s), groups, or corporations whose name, image, recorded words, or private information (e.g., employment information) may be reproduced in the source material. The holder of the original copyright isn't necessarily the National Park Service. The National Park Service is not legally liable for copyright, privacy, or publicity infringement when materials are wrongfully used after being provided to researchers for "fair use."

This institution reserves the right to refuse to accept a copying order if fulfillment of the order is judged in violation of copyright or federal or state privacy or publicity law.

ACKNOWLEDGEMENTS

The Northeast Museum Services Center staff would like to express their gratitude towards the staff at Lowell National Historical Park for their assistance in carrying out this work. In particular, thanks must go to Museum Specialist Jack Herlihy and Chief of Cultural Resources and Programming David Blackburn for all their help. The Park generously provided a processing area, and Administrative Officer Diana Shiba aided greatly in managing the project funding. The assistance of the Park's Museum Aide Ami Krawczyk in cataloging the records has been invaluable; special thanks goes to her.

HISTORY

Establishment and Objectives

The Lowell Historic Preservation Commission was established in the 1978 legislation creating the Lowell National Historical Park. The Commission was to create a Preservation Plan and to set standards for the historic preservation efforts in the Park zone (part of the downtown, the Wannalancit Textile Company area, and the canal system) and the Preservation District around the Park of over 800 properties. The Commission was to focus rehabilitation efforts on ten historically important buildings mentioned in the Legislation. Another important goal was to aid the Park in telling the human history of Lowell‘s industrial past.

The national park concept had been growing since 1968 when Lowell educator J. Patrick Mogan of the Human Services Corporation, a City of Lowell educator, conceptualized an ~~–ur~~ban park” in which Lowell‘s citizens celebrated their immigrant pasts and industrial city. Other civic leaders were intrigued with a park‘s promise of tourism and development. The State of Massachusetts developed the Lowell Heritage State Park to promote the canal system‘s recreational and historical potential. In a similar effort, the City of Lowell created a Historic Canal District. The federal Lowell Historical Canal District issued detailed recommendations for a national park; these recommendations were recognized in the Park‘s enabling legislation and became the focus for the Commission‘s activities.

Development Projects

The Commission was unlike other park partners in that it received yearly appropriations to develop major projects. It had been given the power to lease and acquire properties; in contrast, the Park could only acquire property by gift. The Commission, therefore, acted on behalf of the Park to rehabilitate properties for the Park‘s use, to create a trolley transportation system, and to develop pathways along the canals.

The first major project completed was Market Mills, the rehabilitation of two mill buildings abandoned by the owners, for affordable housing and the Park visitor center. The Commission worked with the private developer, Market Mills Associates, to create public green space and a courtyard. The Commission also fitted up the remaining ground level spaces for tenants A Brush with History art gallery and studios, the Lowell Telecommunications Corporation, and a food court.

The Commission funded and oversaw the exterior and interior renovations of the Boott Mills Boarding House which became the Mogan Cultural Center, a major Park exhibit space also housing the University of Massachusetts at Lowell Special Collections. The Commission created the Boarding House Park area in front of the Cultural Center. Boott Mills No. 6, now the center for the Park‘s museum operations, originally had been restored for another owner, the

Wang Laboratories, with funding from the Commission (the Wang eventually sold the building to the Commission which donated it to the Park). The Commission also funded the stair tower renovations for the Boott Mills buildings.

The Lowell Historical Canal District Report and the enabling legislation mandated a trolley system to run between the Park's venues. The Commission developed the electrified trolley system consisting of Boston and Maine Railroad rehabilitated tracks and new trolley cars. The first two cars were open-sided and built upon undercarriages from Australia. The electrified system began in 1984 with the Park maintaining and operating the cars. One enclosed closed car for yearlong use was built by 1987. The tracks were extended in two major projects with one extension from French Street to the Wannalancit area and the other extension to Eastern Canal Park and the Jack Kerouac Commemorative.

The Commission, along with the Park and state and city entities, participated in what would become known as the Canalway project, the building of walkways and the general enhancement of the canal system. In projects for the revitalization of the Central Street/Pawtucket Canal area, the Boott Mills area, and the Boott Mills Canalway, the Commission developed the types of signage, fencing, and railing typical of the Canalway projects. The Lucy Larcom Park and Prescott Park lining the canals were also rehabilitated.

The Commission noted in its literature that major projects were developed with a cultural component. The Commission oversaw a Mills Girls, an Immigrant, and a labor history exhibit for the Mogan Cultural Center. It was a major sponsor of Lowell‘s public sculpture program developed in the 1980s. One of the first examples of public art was installed in the Market Mills park area, and others were located to complement the canalways. The purpose of Boarding House Park was to serve as a stage for plays and concerts.

Grants and Loans

The Cultural Programs staff of the Commission supervised the granting of awards in two annual cycles until around 1986 when one round of grants was given yearly. The grants were to relate to the Park‘s themes or to historical themes of Lowell. Popular topics were immigrants and immigration, the fine and decorative arts and architecture in Lowell, ethnic festivals, and archaeology of local sites. The Cultural Programs staff was also responsible for major funding and general support to public sculpture, to the Folklife Program research project with the Library of Congress, to the New England Folklife Center housed in the Mogan Cultural Center, and to the Center‘s exhibits.

The Preservation Plan team described in the Plan and Details of the Plan the Commission‘s building grants and loans programs and created an Index of Properties ranking the buildings‘ historical significance. The Architectural and Planning staffs developed the standards for design review for the historic rehabilitation with the City of Lowell to guide renovations in the Park and Preservation District. Grants and loans following these standards for buildings listed as nationally important in the Index were given in amounts ranging from the thousands to hundreds of thousands. Commission literature cites the high ratio of private investment as compared to the LHPC public investment in these historic rehab projects.

Aftermath

The Commission successfully lobbied for and obtained an extension of its tenure in the mid-1980s. However, the second effort to extend its services was not acted upon and so the Commission disbanded in mid-1995. The Park continued the Canalway efforts and participated in design review for the Preservation District. The Park, the Lowell Office of Cultural Affairs, and educational institutions fostered Lowell‘s cultural and arts promotion.

The Commission‘s staff, led by its Executive Directors Fred Faust, Armand Mercier, and Peter Aucella at various times, had been put together specifically to run development projects and administer grants. The Commission received national awards for the trolley system and waterfront development. It hosted visitors from the United States and the United Kingdom who wanted to learn about its role in Lowell's preservation and rebuilding.

The legacy of the Commission is perhaps most evident in the major development projects for the Park such as the trolley system, the Park‘s Boott Mills Museum and Mogan Center, and segments of the Canalway. However, the cultural grants program fostered artwork and publications and reinforced the Park‘s programming in folklife and Lowell history. Much of what is now appreciated as historic downtown Lowell resulted from the Commission‘s grants and loans enabling its rehabilitation and revitalization.

SCOPE AND CONTENT

Lowell Historic Preservation Commission Records
1971-2011 (bulk dates: 1978-1995)

CATALOG NUMBER	LOWE 16552
VOLUME	100 LF
DESCRIPTION	Minutes, correspondence, administration files, and publications including news articles document the activities of the Commission, in particular their funding of historic preservation and cultural grants. A substantial portion of the records relate to the major building and restoration projects the Commission developed for the Lowell National Historical Park.
ORGANIZATION	[Organization]Organized into nine series: I. Pre-Commission Records, II. Central Files, III. Administrative Files, IV. Cultural Programs, V. Planning, VI. Architectural, VII. Development Projects, VIII. Publications, and IX. Photographic Materials. [Arrangement]According to the nature of the materials, the arrangement is chronological or alphabetical.
PROVENANCE	When the Lowell Historic Preservation Commission (LHPC) ceased operations in 1995, its central files and cultural programs records were taken by the Lowell National Historical Park (LOWE) and housed in the Library. Several LHPC employees involved in the development projects continued their careers at LOWE and brought their files with them. After a 2007 archives survey noted these records, they were gathered at a central location in the Park.
RESTRICTIONS	NO
ASSOCIATED MATERIALS	Resource Management Records Lowell National Historical Park.

IX. Photographic Materials, 1977-1995

(List of Separated Materials including photographic materials and oversize materials follows)

SERIES DESCRIPTIONS

I. *Pre-Commission Records, 1976-1978*

The legislative history and the report of the Lowell Team outlining preferences for the proposed park are located in this series.

Another source of ideas regarding an urban park in Lowell was the Human Services Corporation. Its records are available at Special Collections, Univ. of Mass. Lowell.

II. *Central Files, 1987-1995*

The Commission adopted the central filing system of the National Park Service so the Commission's official records are marked and filed according to the NPS records schedule.

The minutes of the Commission, the first portion of the Central Files, give the summary of the monthly meetings. In these meetings, the LHPC staff briefed the commissioners drawn from federal, state, and local governments and the community at large about the Commission‘s development projects and cultural affairs programming. The minutes beginning in 1985 contain the briefing papers from the staff which give extensive information about status of the Commission‘s many projects and are extremely helpful in determining the chronology of various events. The briefing papers also include photocopies of news articles mentioning the Commission, thus indicating the Commission‘s relationship to the public.

Another major segment relates to memorandums of agreement, in particular to the Lowell Development and Financial Corporation, a consortium of local banks that administered the preservation loans for the Commission.

Only a small portion of "top-level" records related to planning (D), interpretation (K), and history (H) are located in the Central Files. The research will find those materials in the Planning and Architectural series.

Only a small portion of records related to planning (D), interpretation (K), and history (H) are located here.

III. *Administrative Files, 1980-1995*

In addition to its Central Files, the Commission's administration including its executive director filed documents into folders labeled only with subject headings. A major topic is the ongoing battle to regulate commercial billboards in the Park and Preservation District. The Standard Operating Procedures (SOP) for preservation and cultural program grants and the planning process are also present.

IV. *Cultural Programs, 1980-1995*

Apart from its regular cyclical grants program, the Commission provided major funding for projects related to the themes of the city's immigrant history and the arts. While the Park was to administer the exhibit space in the newly rehabilitated Mogan Cultural Center; the Commission helped to fund and oversee the exhibits featuring immigrant and labor history. Boarding House Park was conceived as a space to display the performing arts. The Commission sponsored several major public sculptures placed at highly visible places at Market Mills and the canalways.

A. *Special Projects, 1985-1995*

Materials re: public art projects‘ genesis and funding are located here; documentation on the physical locations is also in the Development Projects series.

B. *Grant Administration, 1981-1993*

This sub-series holds the documentation about the formulation of grant criteria as well as the lists of funded projects.

C. *Grant Project Files, 1981-1993*

These files demonstrate the range and variety of the funded grants. They are arranged by grant account numbers.

D. *Subject Files, 1977-1994*

The minutes of the cultural staff are included. A major topic is the lengthy development of a video related to the labor movement for the Mogan Cultural Center.

E. *Photographic Materials, 1984*

V. *Planning, 1979-1995*

The planning staff, including its two Planning Directors, Sarah Peskin, and Christine (Goetting) Briggs, maintained the documentation regarding the Commission's major projects arranged in subject files. These files contain a wealth of background information about the Preservation Plan, the Canalway, transportation in Lowell including the trolley system, and the relationship between historic preservation and economic development. The Development Projects series (see below) documents the projects in the subsequent phases.

The Preservation Plan (see copy in the Publication Series) noted the requirement for an Index of Properties to rate the structures in the Preservation District. The team who prepared the Preservation Plan determined the historic significance of properties within the National Park and Preservation District and created a ranking system indicating those of major national

significance, local significance, and little significance. Those of national significance were eligible for Commission assistance.

The Index's ratings were based on the information collected for the Cultural Resources Inventory. The architectural firm of Shepley, Bulfinch, Richardson and Abbott conducted for the NPS this survey of the individual properties in the Preservation District which was completed by January 1980. The published report and the original surveys with attached photographs are included in this sub-group. (An electronic copy courtesy of LOWE and Special Collections, Univ. of Mass. Lowell is available at http://uml.edu/cri.)

A. *General Files, 1979-1995*

B. *Planning Director, 1979-1995*

C. *Preservation Plan, 1979-1995*

D. *Index of Properties, 1979-1995*

1. *Index, 1979-1995*

2. *Cultural Resources Inventory, 1979-1995*

VI. *Architectural, 1979-1995*

The highly interrelated subgroups in this subseries document the activity of Chief Historical Architect Charles Parrott who served throughout the tenure of the Commission. Historical Architects David Bitterman and Lance Kasperian also served on the staff. The staff often provided the preliminary designs and always participated fully in the major development projects, hence the extensive information concerning canals and canalways including field notes and measurements, photoprints, and slides. (The Development Projects series also contains the architects' files, see below).

The staff also administered the historic preservation grants (sometimes called the physical grants as opposed to the cultural grants) and loans program. To obtain the grants or larger loans (run through the LDFC), the projects needed to adhere to the Standards guiding the Preservation District. In addition, buildings applying for certain exterior modifications needed to follow the Standards. Thus, the Commission's architect participated in the design review process for many buildings in historic downtown Lowell and developed the Preservation Grants/Loans, Design Review, and Indexed Buildings files with rehabilitation project documents including drawings. Major buildings such the Bon Marche Building, Early Residence, St. Anne's Church, and Old City Hall are represented.

A. Field Notes, 1979-1994

B. Preservation Grants/Loans

1. *Administration*

2. *Grant Project Files*

C. *Design Review*

D. *Indexed Buildings Files*

VII. *Development Projects, 1979-1995*

The major construction and rehabilitation projects generated considerable documentation including contracts and modifications, correspondence between contractor and the Commission's project supervisors and between Commission administrative, architectural, and planning staffers, copies of land deeds and easements, and design and construction drawings. The projects developed for the Park including the trolley and the canals are in this series (the Planning Files – see above – document the projects‘ inception). The documentation re: the Gas Light Building, once the offices of the Commission, is included because it is one of the ten buildings singled out for special consideration in the enabling legislation. The files on St. Peter's Church are extensive and demonstrate the considerable involvement of the Commission staff and resources attempting to rehabilitate a historic structure and halt demolition.

A. *Specifications*

Specifications, often packaged as project manuals, give the special instructions set out to potential bidders in the contract package and thus serve as one of the starting points for approaching the projects. The Commission's architectural staff gathered specifications including those the Commission developed for private properties.

B. *Contracts*

The Commission had its own contracting officer who followed NPS procedures. These copies were housed separately from other Commission files and thus may be extra Contracting Officer copies. (In addition, copies of the contracts and their modifications were kept in the Design and Construction files by project managers and other Commission staff.)

C. *Design and Construction*

This sub-series consists of the documents for the projects' actual design and construction. The Commission fostered communication between staff and contractors by placing their files in an area marked for that project during and after the project. Administrative, architectural, and planning files, therefore, are added to the Contracting Officer Representative's documentation, making for extremely detailed histories. Correspondence, contracts and modifications, drawings, project notebooks, manuals, and photodocumentation comprise these files.

1. *Boarding House*
2. *Boarding House Park*
3. *Canals and Canalways*
4. *Central Street/ Pawtucket Canal Improvements*
5. *Eastern Canal Trolley Bridge & Prescott Way*
6. *Gaslight Building*
7. *Market Mills*
8. *Mogan Cultural Center*
9. *Prescott Park/Way*
10. *Public Art*
11. *St. Peter's*
12. *Trolleys*
    a. *General*
    b. *Tracks (Initial)*
    c. *Car Construction*
    d. *Track Extensions -- French St.*

VIII. *Publications, 1977-1995*

Articles, newsletters, and booklets by and about the Commission make up this series. The Commission's foundation documents including the Preservation Plans and Details suggesting the preservation standards are here. The articles collected by Commission staff reveal the local and national significance of the Park and Lowell's revitalization.

A. *Published by LHPC*

B. *Sponsored by LHPC*

C. *Re: Lowell (Including LHPC)*

IX. *Photographic Materials, 1977-1995*

These items, mostly professional photography of events and places for publicity, were located in a box marked "LHPC Photo Library." The researcher should be aware that most of the Commission photodocumentation for projects is contained in the Planning, Architectural, and Development Projects series.

Audio-visual and oversize paper items were physically removed from the above series with separation sheets indicating the original location in the collection.

10. Project Documentation – Slides, 1987-1988.

Box 161

c. Transmittals

1. Index of Transmittals.
2. Transmittals 002-012, 1986-1987.
   - 002-Concrete Mix Design, 9/86.
   - 003-Hollow Metal Schedues, Manufacturers Question Sheets, 9/86.
   - 004-Rusco Steel - Foundation Rebar, 9/86.
   - 005- Bolt & First Floor Plan, 9/86.

- 006-Carpet Samples for Mats, Entrance Mat Drawings, Balco Color Catalog Carpet, 11/86 - /87.
- 006A-Balco Mats Sample, Drawings for Sample W/ Letter And Warranty, 12/86.
- 006B-Entrance Mats Color Selection & Flow-Direction Request, 12/86.
- 007-Toilet Partitions & Accessories, 9/86.
- 007A-Toilet Partition Cuts & Colors (Resubmittal), Sanitary Napkins Tampon Vendor, 11/86.
- 007B-Toilet Partition Resubmission & Cover Letter From Contractor, 1/86.
- 007C-Toilet Partition Catalogs & Colors, 8/87.
- 008-Disappearing Stair, 9/86.
- 009-AC Horn PVC Waterstop, Self Expanding Cork-Joint Filler, Concrete Hardner, Anti-Hydro-Acuricon-Curing Compound, "MoisTop" Vapor Barrier, 9/96.
- 009A-Kure-N-Seal Curing & Sealing Compound, 10/86.
- 010-Loading Dock Square, 9/86.
- 011-Mezzanine Framing, 2nd Floor Framing Plan, Roof Framing Plans, Sections & Details, 10/86.
- 012-Electric & Telephone Manhole Frames & Covers, 10/86.

3. Transmittals 013-020, 1986
   - 013- Payne Elevator Power Confirmation, 10/86.
   - 014- Certainteed Bait Consultation, Styrofoam "SM" Insulation, 10/86.
   - 015- Sealants, 10/86.
   - 016- Telephone & Electric Manholes, 10/86.
   - 017- Column Details of Structural Steel, Beams B1-B9 & St. Details, Section Plans E1-E6, 10/86.
   - 018- Copper Seal Flashing, Block Samples, 10/86.
   - 019- Certification of Compliance, Durawall Anchors & Ties, Stainless Steel Granite Anchors, 10/86.
   - 020- Plumbing and Heating, 11/86.
4. 020A- HVAC Submittals, Urinal, Hot Water Heater, Back Flow Preventer, Roof Drain, Wall Hydrant, 12/86.
5. Transmittals 021-023, 1986.
   - 021- Fire Extinguisher & Fire Extinguisher Cabinets, 11/86.
   - 022- Finish Hardware Schedule, Catalog Cuts, 11/86.
   - 022A- Finish Hardware Schedule Resubmittal, 12/86.
   - 023- Sprinkler System, 11/86.

Box 162

1. Transmittals 024- 033, 1986-1987
   - 024- Floor Boxes, 11/86.

- 025- Elevator Drawing & Related Letters, 11/86.
- 025A- Drawing Resubmittal, Poer Confirmation, Cover Letter, 12/86.
- 026- Tile Samples & Brochure, 11/86.
- 027- Drawings: Car Operating Station, Telephone Cabinet, Emergency Light, Position Indicator, In-Car Lantern, Hall Station, Lock Cylinder Detail, 11/86.
- 027A- Elevator Details Resubmittal, Emergency Light Brochure, 1/87.
- 028- Carlon Schedule 40 PVC Conduit, Certainteed Schedule 40 PVC, 11/86.
- 029- Wood Door Schedules # 1 & # 2, Graham Brochure, 11/86.
- 030- Steel Erection Drawings & Existing Building Stl. Details, 12/86.
- 031- Mixed Grain Random Board- Letter, 11/86.
- 032- Tile Samples, 11/86.
- 032A- Vinyl Cove Base Resubmittal, 12/86.
- 033- Panels, Switch Board, & Switches, 12/86.

2. Transmittals 034-038, 1986-1987.
   - 034- Fire Alarm System, Wheatland Rigid Steel & Steelduct Rigid Steel Conduit & EMT, 12/86.
   - 035- Painting Proposal, Colors & Manufacturing Data Sheets, 12/86.
   - 035A- Painting Cuts Resubmittal, 3/87.
   - 036- Security System, 12/86.
   - 036A- Security System Resubmittal, 3/87.
   - 037- Granite, 12/86.
   - 038- Slate Roofing, Flashing & Sheet Metal, 12/86.
3. Transmittals 038A-047, 1986-1987
   - 038A- Slate Roofing, Flashing & Sheet Metal, 1/87.
   - 038B- Flexible Sheet Roofing 2nd Resubmittal, 3/87.
   - 039- Stair Drawings, 12/86.
   - 040- Layout & Detail Drawing For Granite, 12/86.
   - 040A- Granite Layout & Detail -Record Drawing, 1/87.
   - 041- Elevator Cab Detail Drawings & Color Chart, 1/87.
   - 041A- Elevator Cab Elevations, 1/87.
   - 042- Ductwork Drawings, Revised Suppliment Index, 12/86.
   - 043- Entrance Details, Covor Sheet & Color Charts, 12/86.
   - 043A- Final Elevator Drawings, 1/87.
   - 044- Miscellaneous Item Drawing, 12/86.
   - 045- Drawings E4 & B4-B9, 1/87.
   - 046- Paint Color Chart, 12/86.
   - 047- Brick Mortar Mix Design, 1/87.
4. Transmittals 048-069, 1987.
   - 048-Electrical Fixtures, 1/87.
   - 049-Stairs, 1/87.

- 050-Fire Proofing, 1/87.
- 051-Concrete Curing & Hardening, 1/87.
- 052B- Window Drawings # 3 & # 5, 5/87.
- 052C- Drawings 18, 18A, & 19, 6/87.
- 053A-Glass Drawing Resubmittal, 3/87.
- 054-Granite Sample, 1/87.
- 054A- Granite Sample, 1/87.
- 055-Marked Up Drawings for Carpet, 2/87.
- 056-Louver Drawings & Colors, 2/87.
- 057-Tapered Insulation Drawings, 1/87.
- 058-Revision Drawing to Section 302, 1/87.
- 060A- Louvers 1-3, 9/87.
- 063- PCU Partition Bracing Drawing M8, 2/87.
- 064-Simplex Door Holder, 3/87.
- 065-Fire Rated Access Door, 3/87.
- 066-Beam Extension, 4/87.
- 066A- Beam Extension Resubmittal, 5/87.
- 067-Louver Color Chart, 4/87.
- 068-Electrical Fixtures, 3/87.
- 069-Control Systems Books, 3/87.

5. Transmittals 070-087, 1987
   - 070-Drywall, Steel Frames, Insulation, Stucco, 4/87.
   - 071-Dimming System (Mill Girl), 3/87.
   - 072-Partition Bracing, 4/87.
   - 073-Security System Magnetic Door, 4/87.
   - 075- Color Charts for Heat Pumps, 4/87.
   - 076-Slate Samples, 5/87.
   - 076A- Replacement Slate Samples, 9/87.
   - 077- 4 Sided Gallery For Dry Wall, Frame & Cover Medium Duty, 6/87.
   - 078-Alkco Fixture, 5/87.
   - 079-Sketch "P" Grills, Backer Angles, 6/87.
   - 080-Access Door From Under Stairway, Jun-87.
   - 081-Steel Stair Drawings, 6/87.
   - 082-KV Vable, 6/87.
   - 083-Cypress Blend Roof Paver (Sample), 6/87.
   - 084- Storm Window Details, 6/87.
   - 085- Sash Lock, 6/87.
   - 086-Details for Light Hangers, 7/87.
   - 087-Standard Custom Chart, 6/87.
6. Transmittals 088-097, 1987-1988

- 088- Installation of Pre Action Fire Detectors, 7/87.
- 089-Louvers L1 & L2, 7/87.
- 090-Window Frame Color Chips, 7/87.
- 091-Pecoustic Brochures, 8/87.
- 092-Electrical Controls (HVAC), 10/87.
- 093-Wood Door Warranty, 1/88.
- 094-Hydrotech Roof & Warrantys, 1/88.
- 095-Fixture Brochures, Dimming System, Fire Alarm Manual, Security Alarm Manual, Switch Board Panels & Service Cabinet, 2/88.
- 096-Elevator Maintenance Manuals, Test Report, Letter of Guarantee, 2/88.
- 097- Maintenance & Parts Manual (HVAC), 2/88.

Kevin

As you will recall, I chair the NH Lower Merrimack River Local Advisory Committee (LMRLAC). We have a direct interest in the relicensing of the Boott Hydro project whose headpond constitutes our field of regard. For unknown reasons. as an early stakeholder I appear to have been dropped from your distribution list.

I now learn that an Initial Study Report on Recreation matters appears to have been issued earlier this year . Had I been made aware of this report while in draft form I would have submitted the following comment.

The navigable and scenic head-pond of this hydro project extends twelve miles into Southern New Hampshire and

constitutes the major natural resource public body of water in this populous section of the State. Furthermore the recent crest gate project on the Pawtucket Dam has stabilized the upstream water levels, thereby further increasing the recreational value of this scenic, swimmable, skiable stretch of the River.

In 2017 the State-Chartered NH Public Waters Access Advisory Board (PWAAB) assigned the highest state-wide priority to improving public access to this section of the Merrimack. Although a small boat launch has now been upgraded in Nashua's Greeley Park, this is inadequate to serve the large boating population of Southern New Hampshire. The Recreation Study of this Project should explicitly acknowledge the need for additional boat launch capacity in this public head-pond and <u>make provisions for Boott Hydro to contribute thereto.</u>

What can be done to ensure the LMRLAC remains a party to this relicensing as it moves forward?

Regards
Gene Porter
Chair NH LMRLAC
Member, NH PWAAB

Subject: FW: FERC 2790 Recreation study

From: Kevin Webb
Sent: Tuesday, September 29, 2020 3:16 PM
To: 'gene porter' <gporter77@gmail.com>
Subject: RE: FERC 2790 Recreation study

Gene:

Are you referring to the bike trail that crosses the river alongside the Circumferential Highway between Hudson and Nashua? If so, yes, our headpond extends all the way up to Moore's Falls just south of the airport so that would be within the footprint of our Recreation Study. I do not see that mentioned in the report, but we were more focused on public sites that provide direct access to the river.

Understand that this is a lengthy process and that there will be many more opportunities for you to submit formal comments.

Kevin

Please confirm that the section of the headpond below the Sagamore Bridge in NH is in fact within the footprint of the Recreation Study.

If so, what needs to be done to permit revision of the study that you intend to release tomorrow to reflect the inadvertent delay of our comments re public water access in NH.

Thanks

Gene Porter

Great! Let's say Tuesday November 17. I assume I'm going to need a full day (at least) to go through the material, so what time could I get started in the morning?

Will I be coming to 67 Kirk Street, or somewhere else?

Hi Patrick

I'm out of the office the second half of next week, but I can do the 17th or the 19th. Let me know which day you prefer and what time works for you.

Thanks
Emily

Hi Emily,

I've been crunching my schedule to see what will work. Is there any chance for Thursday of next week? November 12? Otherwise I could do Tuesday or Thursday of the following week. November 17 or 19.

Thanks for the help!

Hi Patrick

I can assist you with viewing the materials.

Appointments are available this week Thursday November 5 or Friday November 6. 9:00-3:30.
Next week Monday November 9 or Tuesday November 10 9:00-3:30.

Let me know if a day/time within those options works for you. If not we can push the appointment out to another week.

Thanks
Emily

Hi Emily & Laurel,

I wanted to check and see whether I can set up an appointment for some research I'm doing in support of the relicensing for the Boott hydroelectric project. I've reattached the list of materials mentioned below.

Many thanks,

Christine,

If I never thanked you for forwarding all the Finding Aids I apologize. They're wonderfully useful.

I'm ready to jump into the archival research process. Do I need to reach out to someone other than you to gain access to the records? I've attached a list of materials, based upon my review of the Finding Aids, that I think are the most likely to be useful. Please let me know the process and I'll set up an appointment to review these files.

Many thanks,

Subject: Lowell Revised ISR Meeting Summary Submission

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Dear Stakeholders:

Boott Hydropower, LLC (Boott) is pursuing a new license from the Federal Energy Regulatory Commission for the Lowell Hydroelectric Project. In accordance with the Integrated Licensing Process (ILP), Boott held the Revised Initial Study Report (ISR) Meeting on October 15, 2020 by conference call. The Commission's regulations require Boott file the attached summary of the Revised ISR Meeting within 15 days of the Revised ISR Meeting.

Should you have any questions regarding the attached Revised ISR Meeting Summary, please contact Kevin Webb, Licensing Manager with Boott, at (978) 935-6039 or kwebb@centralriverspower.com.

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Hello Celeste and Christine –

As detailed in the attached letter, Boott is requesting further consultation with NPS regarding the Water Level and Flow Effects on Historic Resources Study. Specifically, Boott is seeking NPS's assistance in identifying historic canal structures along the Upper Pawtucket and Northern Canals that have previously been affected by Project-related water levels or flows. Initially, our approved study plan for this report included a site visit with NPS but Boott is looking at alternatives now due to the ongoing COVID-19 pandemic.

Boott is seeking any records of previous damage, maintenance, or repairs to structures along the Upper Pawtucket or Northern canals that have resulted from Project-related flows or water levels. Documentation may include photographs, maps, maintenance records, or other similar files that would facilitate Boott's analysis.

We respectfully ask that the NPS provide the requested information on or before February 2, 2021. Boott is also available to coordinate a conference call with the NPS if it would assist your office in responding to this request or in identifying the types of specific information relevant to this study.

Thank You,

Kelsey Scott, MS
Regulatory Specialist

Kevin,

The Department of the Interior uses a secure file transfer site for large format files which I will use to deliver to Boott/HDR. Some records include photographs and detail drawings with information that should be filed as "privileged." Most records can be filed as public documents.

Watch for an email to follow shortly through our secure file transfer site.

Kelsey,

NPS staff have researched and compiled a series of records in response to your RFI. The file sizes are too large to transmit via email. We plan to file records to the docket today along with the attached cover letter which summarizes the relationship between flow conditions, historical resources and related maintenance, repairs, or rehabilitation.

If you have additional questions, please contact David Lieb, Historical Architect and Section 106 Coordination for Lowell National Historical Park (cc'd).

Thanks for asking Christine. I will defer to your judgement on whether to file public vs. privileged. My understanding is that the need to guard cultural information from the public is largely a concern over keeping information away from "artifact hunters." I agree that there should be little concern for that in this case.

Kevin and Kelsey,

NPS is planning on filing the RFI response letter along with the PDF records on the FERC docket. The only file we felt should be filed as "privileged" rather than "public" is the Class A cost estimate for repairs on the Northern Canal Waste Gatehouse. Government estimates should not be made public if the work will be advertised and constructed.

Do you concur? Were there any other records you have concerns with filing public?

Kelsey,

NPS staff have researched and compiled a series of records in response to your RFI. The file sizes are too large to transmit via email. We plan to file records to the docket today along with the attached cover letter which summarizes the relationship between flow conditions, historical resources and related maintenance, repairs, or rehabilitation.

If you have additional questions, please contact David Lieb, Historical Architect and Section 106 Coordination for Lowell National Historical Park (cc'd).

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Hello Celeste and Christine –

As detailed in the attached letter, Boott is requesting further consultation with NPS regarding the Water Level and Flow Effects on Historic Resources Study. Specifically, Boott is seeking NPS's assistance in identifying historic canal structures along the Upper Pawtucket and Northern Canals that have previously been affected by Project-related water levels or flows. Initially, our approved study plan for this report included a site visit with NPS but Boott is looking at alternatives now due to the ongoing COVID-19 pandemic.

Boott is seeking any records of previous damage, maintenance, or repairs to structures along the Upper Pawtucket or Northern canals that have resulted from Project-related flows or water levels. Documentation may include photographs, maps, maintenance records, or other similar files that would facilitate Boott's analysis.

We respectfully ask that the NPS provide the requested information on or before February 2, 2021. Boott is also available to coordinate a conference call with the NPS if it would assist your office in responding to this request or in identifying the types of specific information relevant to this study.

Thank You,

Kelsey Scott, MS
Regulatory Specialist

Hi Patrick

I have some availability most days next week.
Tuesday (16th) 8:30-2:30
Wednesday (17th) 8:30-3:00
Thursday (18th) 11:00-4:00
Friday (19th) 9:00-4:00

Let me know if something in those options works for you. If not we can figure out something for the following week.

Emily

Hi Patrick

We can start at 9:00.

Our collection is stored on the 3rd floor of the Boott Cotton Mills Museum at 115 John St. The closest parking is the Joseph Downes garage on the corner of John and French St.

The building isn't open to the public that early and there are a couple construction projects going on. To make it easier I will meet you outside by the museum entrance and walk you into the building. If you're arriving early or late you can reach me at 978 970-5241.

Let me know if there are any questions anytime before your appointment.

Thanks
Emily

Christine,

If I never thanked you for forwarding all the Finding Aids I apologize. They're wonderfully useful.

I'm ready to jump into the archival research process. Do I need to reach out to someone other than you to gain access to the records? I've attached a list of materials, based upon my review of the Finding Aids, that I think are the most likely to be useful. Please let me know the process and I'll set up an appointment to review these files.

Many thanks,

Patrick W. O'Bannon, Ph.D.

Thanks Rob. I got my second shot yesterday. No reactions so far. For what it's worth, I was originally scheduled for my shot Saturday but was able to easily move it to Sunday when I thought we were going to do the Missisquoi study this weekend. Maybe you can try to move your a day or so. I don't think we can wait until Thursday though to start putting things in place, so we should figure this out asap.

Bob:

I wanted to recirculate the survey forms and the safety plan that we developed for this study and that we distributed last year. I would recommend that we setup a go/no-go call for Thursday afternoon so that we can evaluate the flows.

We may also have some logistical issues with this weekend. Both Kelsey and I are needed to support this study, and we are both receiving our second dose of the COVID vaccine at the end of this week. Depending on the potential side effects, we may not be able to travel on Friday for a Saturday flow release. In any case, we should know more by Thursday afternoon.

If Thursday works for you, I'll send around an Outlook invite.

Thanks,

That sounds perfect. The variable is the Wednesday rain that looks a little heavier up north. Hopefully we can pull this off just using the Field powerhouse. Should we proceed with the tentative assumption that this is a go and notify volunteers, agencies, and public safety? You should also be prepared for the beach put-in and take-out cleanup. Do you have an invitation ready for our volunteers that includes the logistics, Covid protocols, and pre-run survey? I have a list of names that I can forward it to and can also provide you with the contact list.

Good morning. I'm looking at the flow and weather forecast for this week, and from what I can see, all signs point toward ideal conditions for the whitewater boating study on Saturday. Flows are currently in our target range but dropping slightly and we have some rain forecast for mid-week. We should schedule a call for tomorrow to finalize the plan for moving forward and then confirm that we are a go for lift off on Thursday if everyone agrees.What are you all seeing?

Dear Kevin,
I'm confirming our conversation yesterday regarding scheduling the on-water portion of the whitewater boating study in the Lowell bypassed reach. As we discussed, while flows for the upcoming weekend are suitable for the controlled-flow study, CRP is unable to schedule the study for this coming weekend 4/24-4/25 or the following weekend 5/2-5/3 due to its priority in completing and filing its Final License Application for the project. The timing is unfortunate due to the current availability of flows for the on-water portion of the study. We will continue to monitor the flow forecast for another opportunity, but I remain concerned about when another opportunity will occur. We agreed CRP is required to complete the study as part of its FERC relicensing of the project and will need to amend its Final License Application when the study is complete to address project impacts on recreation use in the project boundary. I look forward to working with you to complete this study at the earliest possible time.

Yours truly,
Bob

For what it's worth, I was originally scheduled for my shot Saturday but was able to easily move it to Sunday when I thought we were going to do the Missisquoi study this weekend. Maybe you can try to move your a day or so. I don't think we can wait until Thursday though to start putting things in place, so we should figure this out asap.

That sounds perfect. The variable is the Wednesday rain that looks a little heavier up north. Hopefully we can pull this off just using the Field powerhouse. Should we proceed with the tentative assumption that this is a go and notify volunteers, agencies, and public safety? You should also be prepared for the beach put-in and take-out cleanup. Do you have an invitation ready for our volunteers that includes the logistics, Covid protocols, and pre-run survey? I have a list of names that I can forward it to and can also provide you with the contact list.

Good morning. I'm looking at the flow and weather forecast for this week, and from what I can see, all signs point toward ideal conditions for the whitewater boating study on Saturday. Flows are currently in our target range but dropping slightly and we have some rain forecast for mid-week. We should schedule a call for tomorrow to finalize the plan for moving forward and then confirm that we are a go for lift off on Thursday if everyone agrees.What are you all seeing?

Bob:

I wanted to recirculate the survey forms and the safety plan that we developed for this study and that we distributed last year. I would recommend that we setup a go/no-go call for Thursday afternoon so that we can evaluate the flows.

We may also have some logistical issues with this weekend. Both Kelsey and I are needed to support this study, and we are both receiving our second dose of the COVID vaccine at the end of this week. Depending on the potential side effects, we may not be able to travel on Friday for a Saturday flow release. In any case, we should know more by Thursday afternoon.

If Thursday works for you, I'll send around an Outlook invite.

Thanks,

1 Introduction and Background

Boott Hydropower, LLC (Boott), is the Licensee and operator of the 20.2-megawatt (MW) Lowell Hydroelectric Project FERC No. 2790) (Project or Lowell Project). The Project is located along the Merrimack River in Middlesex County, Massachusetts and in Hillsborough County, New Hampshire.

The existing license for the Project was issued by the Federal Energy Regulatory Commission (FERC or Commission) with an effective date of May 1, 1973. The existing license expires on April 30, 2023. Accordingly, Boott is pursuing a new license for the Project pursuant to the Commission's Integrated Licensing Process (ILP), as described at 18 Code of Federal Regulations (CFR) Part 5. As proposed in Boott's January 28, 2019 Revised Study Plan (RSP) and approved in the Commission's March 13, 2019 Study Plan Determination (SPD), Boott will conduct a Whitewater Boating and Access Study (Whitewater Study) in support of Project relicensing.

This Whitewater Boating and Access Study Safety Plan (Safety Plan) is intended to provide guidelines and protocols for protecting the safety of volunteer study participants boating the Project's bypass reach during controlled flow releases. This Safety Plan also provides procedures for emergency situations and guidance for communicating with study participants, Project staff, and emergency responders. The Safety Plan was developed in consultation with American Whitewater (AW), the City of Lowell (City), National Park Service (NPS), Zoar Outdoor, and the Massachusetts Department of Conservation and Recreation (collectively, the Whitewater Boating and Access Study Working Group or Working Group).

As a condition to participation in the controlled flow releases, Boott requires volunteers to review this Safety Plan and understand the safety measures, guidance, and requirements herein. Boott notes that this Safety Plan includes details about Personal Protective Equipment (PPE) that participants are responsible for providing, as well as mandatory pre-fieldwork Coronavirus Disease 2019 (COVID-19) screening requirements. Persons who do not have the required PPE or who do not complete the pre-fieldwork COVID-19 screening measures will not be allowed to participate in the Whitewater Study.

1.1 Whitewater Boating and Access Study Overview

The Lowell Project is a run-of-river hydropower plant. When river flows exceed the hydraulic capacity of the two generating units located at the E.L. Field Powerhouse (combined capacity of approximately 8,000 cubic feet-per-second [cfs]), excess flows (up to approximately 2,000 cfs) are routed through the downtown Lowell canal system and through the canal units. When inflows exceed the 10,000 cfs capacity of the generating units and canals, all excess flows are passed over the Pawtucket Dam spillway into the bypass reach. The Project has the potential to affect whitewater boating opportunities in the bypass reach when flows are less than 10,000 cfs.

As described in the approved RSP, the goal of the study is to assess the Project's bypass reach for whitewater boating and access opportunities. The objectives of the study are as follows:

- Assess a range of flows suitable for whitewater boating opportunities in the Project's bypass reach;
- Assess the frequency, timing, duration, and predictability of paddling flows under current and proposed Project operations;
- Define potential locations for put-in and take-out points for boaters; and,
- Assess the flow information needs for whitewater boating and the current and potential flow information distribution system.

The approved study plan includes three primary tasks:

- **Task 1: Study Planning and Preparation** – The Study Planning and Preparation task includes (1) formation of the Working Group and identification of volunteers to participate in controlled flow release evaluations; (2) identification of appropriate put-in and take-out locations for on-water evaluations; (3) development of a Safety Plan; (4) determination of a method for verifying flows in the Project's bypass reach; and (5) development of survey forms to be used in the execution of the flow evaluations.

- **Task 2: Controlled Whitewater Releases** – In consultation with the Working Group, Boott will schedule controlled flow releases from the Project's Pawtucket Dam. Each flow release is expected to last approximately three hours, and volunteer boaters will have the opportunity to boat the Project's bypass reach and to make multiple passes at each flow to evaluate lines through sections of the study reach. Pre, post, and comparative surveys will be provided to controlled flow release participants for their completion during this portion of the study.

  Following completion of the controlled flow releases, Boott will conduct an on-site meeting to discuss the results of the study and summarize opinions about the feasibility or quality of different types of boating opportunities at different flows.

- **Task 3: Whitewater Recreational Access** – Based on the results of the Recreation and Aesthetics Study, and in consultation with the Working Group, Boott will conduct an evaluation of prospective whitewater recreational access to the bypass reach.

This Safety Plan has been developed pursuant to Task 1 of the approved Whitewater Boating and Access Study Plan to provide appropriate safety measures and emergency protocols for the controlled flow releases (Task 2). Boott will require that all volunteer boaters participating in the controlled flow releases review and adhere to the Safety Plan requirements and applicable Boott safety policies.

2 Safety Code of American Whitewater

Boott's Safety Plan adopts the Safety Code of American Whitewater (AW 2005) (Safety Code). The Safety Code includes guidelines for Personal Preparedness and Responsibility, Boat and Equipment Preparedness, Group Preparedness and Responsibility, and Guidelines for River Rescue. Guidance from the Safety Code is presented in the following sections***. As a precursor to participating in the controlled flow releases, volunteer boaters will review the Safety Code in its entirety on the AW Website at www.americanwhitewater.org.***

As noted in the Safety Code, the code *"is only a collection of guidelines; attempts to minimize risks should be flexible, not constrained by a rigid set of rules. Varying conditions and group goals may combine with unpredictable circumstances to require alternate procedures"* (AW 2005). If conditions require modifications to this Safety Plan, Boott, the Working Group, and study participants, will document and review those modifications prior to boating the controlled flow releases.

While it is appropriate to develop and review safety guidance for whitewater boating, all parties recognize that whitewater boating has inherent risks that cannot be completely avoided or mitigated. As such, volunteer boaters participating in the controlled flow releases do so at their own risk and in recognition of the inherent dangers that such activities pose.

2.1 Personal Preparedness and Responsibility

1. **Be a competent swimmer,** with the ability to handle yourself underwater.
2. **Wear a life jacket.** A snugly fitting vest-type life preserver offers back and shoulder protection as well as the flotation needed to swim safely in whitewater.
3. **Wear a solid, correctly fitted helmet** when upsets are likely. This is essential in kayaks or covered canoes and is recommended for open canoeists using thigh straps and rafters running steep drops.
4. **Do not boat out of control.** Your skills should be sufficient to stop or reach shore before reaching danger. Do not enter a rapid unless you are reasonably sure that you can run it safely or swim it without injury.
5. **Whitewater rivers contain many hazards which are not always easily recognized. The following are the most frequent killers.**
    I. **High Water.** A river's speed and power increase tremendously as the flow increases, raising the difficulty of most rapids. Rescue becomes progressively harder as the water rises, adding to the danger. Floating debris and strainers can make even an easy rapid quite hazardous. It is often misleading to judge the river level at the put-in, since a small rise in a wide, shallow place will be multiplied many times where the river narrows. Use reliable gage information whenever

possible, and be aware that sun on snowpack, hard rain, and upstream dam releases may greatly increase the flow.

II. **Cold.** Cold drains your strength and robs you of the ability to make sound decisions on matters affecting your survival. Cold-water immersion, because of the initial shock and the rapid heat loss which follows, is especially dangerous. Dress appropriately for bad weather or sudden immersion in the water. When the water temperature is less than 50° Fahrenheit, a wetsuit or drysuit is essential for protection if you swim. Next best is wool or pile clothing under a waterproof shell. In this case, you should also carry waterproof matches and a change of clothing in a waterproof bag. If, after prolonged exposure, a person experiences uncontrollable shaking, loss of coordination, or difficulty speaking, he or she is hypothermic, and needs your assistance.

III. **Strainers.** Brush, fallen trees, bridge pilings, undercut rocks or anything else which allows river current to sweep through can pin boats and boaters against the obstacle. Water pressure on anything trapped this way can be overwhelming. Rescue is often extremely difficult. Pinning may occur in fast current, with little or no whitewater to warn of the danger.

IV. **Dams, weirs, ledges, reversals, holes, and hydraulics.** When water drops over an obstacle, it curls back on itself, forming a strong upstream current which may be capable of holding a boat or swimmer. Some holes make for excellent sport. Others are proven killers. Paddlers who cannot recognize the difference should avoid all but the smallest holes. Hydraulics around man-made dams must be treated with utmost respect regardless of their height or the level of the river. Despite their seemingly benign appearance, they can create an almost escape-proof trap. The swimmer's only exit from the “drowning machine” is to dive below the surface when the downstream current is flowing beneath the reversal.

6. **Broaching.** When a boat is pushed sideways against a rock by strong current, it may collapse and wrap. This is especially dangerous to kayak and decked canoe paddlers; these boats will collapse, and the combination of indestructible hulls and tight outfitting may create a deadly trap. Even without entrapment, releasing pinned boats can be extremely time-consuming and dangerous. To avoid pinning, throw your weight downstream towards the rock. This allows the current to slide harmlessly underneath the hull.

7. **Boating alone is discouraged.** The minimum party is three people or two craft.

8. **Have a frank knowledge of your boating ability,** and don't attempt rivers or rapids which lie beyond that ability.

9. **Be in good physical and mental condition,** consistent with the difficulties which may be expected. Make adjustments for loss of skills due to age, health, and fitness. Any health limitations must be explained to your fellow paddlers prior to starting the trip.

10. **Be practiced in self-rescue,** including escape from an overturned craft. The Eskimo roll is strongly recommended for decked boaters who run rapids Class IV or greater, or who paddle in cold environmental conditions.

11. **Be trained in rescue skills, CPR, and first aid** with special emphasis on recognizing and treating hypothermia. It may save your friend's life.

12. **Carry equipment needed for unexpected emergencies,** including footwear which will protect your feet when walking out, a throw rope, knife, whistle, and waterproof matches. If you wear eyeglasses, tie them on and carry a spare pair on long trips. Bring cloth repair tape on short runs, and a full repair kit on isolated rivers. Do not wear bulky jackets, ponchos, heavy boots, or anything else which could reduce your ability to survive a swim.

13. Despite the mutually supportive group structure described in this code, **individual paddlers are ultimately responsible for their own safety, and must assume sole responsibility for the following decisions:**

    I. The decision to participate on any trip. This includes an evaluation of the expected difficulty of the rapids under the conditions existing at the time of the put in.

    II. The selection of appropriate equipment, including a boat design suited to their skills and the appropriate rescue and survival gear.

    III. The decision to scout any rapid, and to run or portage according to their best judgment. Other members of the group may offer advice, but paddlers should resist pressure from anyone to paddle beyond their skills. It is also their responsibility to decide whether to pass up any walk-out or take-out opportunity.

    IV. All trip participants should consistently evaluate their own and their group's safety, voicing their concerns when appropriate and following what they believe to be the best course of action. Paddlers are encouraged to speak with anyone whose actions on the water are dangerous, whether they are a part of your group or not.

2.2 Boat and Equipment Preparedness

1. **Test new and different equipment** under familiar conditions before relying on it for difficult runs. This is especially true when adopting a new boat design or outfitting system. craft may present additional hazards to inexperienced or poorly conditioned paddlers.

2. **Be sure your boat and gear are in good repair** before starting a trip. The more isolated and difficult the run, the more rigorous this inspection should be.

3. **Install flotation bags** in non-inflatable craft, securely fixed in each end, designed to displace as much water as possible. Inflatable boats should have multiple air chambers and be test-inflated before launching.

4. **Have strong, properly sized paddles or oars** for controlling your craft. Carry sufficient spares for the length and difficulty of the trip.

5. **Outfit your boat safely.** The ability to exit your boat quickly is an essential component of safety in rapids. It is your responsibility to see that there is absolutely nothing to cause entrapment when coming free of an upset craft. This includes:

    I. Spray covers which won't release reliably or which release prematurely.

    II. Boat outfitting too tight to allow a fast exit, especially in low volume kayaks or decked canoes. This includes low-hung thwarts in canoes lacking adequate clearance for your feet and kayak footbraces which fail or allow your feet to become wedged under them.

    III. Inadequately supported decks which collapse on a paddler's legs when a decked boat is pinned by water pressure or inadequate clearance with the deck because of your size or build.

    IV. Loose ropes which cause entanglement. Beware of any length of loose line attached to a whitewater boat. All items must be tied tightly, and excess line eliminated; painters, throw lines, and safety rope systems must be completely and effectively stored. Do not knot the end of a rope, as it can get caught in cracks between rocks.

6. **Provide ropes** which permit you to hold on to your craft so that it may be rescued. The following methods are recommended:

    I. Kayaks and covered canoes should have grab loops of ¼-inch + rope or equivalent webbing sized to admit a normal-sized hand. Stern painters are permissible if properly secured.

    II. Open canoes should have securely anchored bow and stern painters consisting of 8 – 10 feet of ¼-inch + line. These must be secured in such a way that they are readily accessible, but cannot come loose accidentally. Grab loops are acceptable but are more difficult to reach after an upset.

    III. Rafts and dories may have taut perimeter lines threaded through the loops provided. Footholds should be designed so that a paddler's feet cannot be forced through them, causing entrapment. Flip lines should be carefully and reliably stowed.

7. **Know your craft's carrying capacity,** and how added loads affect boat handling in whitewater. Most rafts have a minimum crew size which can be added to on day trips or in easy rapids. Carrying more than two paddlers in an open canoe when running rapids is not recommended.

8. **Car-top racks** must be strong and attach positively to the vehicle. Lash your boat to each crossbar, then tie the ends of the boats directly to the bumpers for added security. This arrangement should survive all but the most violent vehicle accident.

2.3 Group Preparedness and Responsibility

1. **Organization.** A river trip should be regarded as a common adventure by all participants, except on instructional or commercially guided trips as defined below. Participants share the responsibility for the conduct of the trip, and each participant is individually responsible for judging his or her own capabilities and for his or her own safety as the trip progresses. Participants are encouraged (but are not obligated) to offer advice and guidance for the independent consideration and judgment of others.

2. **River Conditions.** The group should have a reasonable knowledge of the difficulty of the run. Participants should evaluate this information and adjust their plans accordingly. If the run is exploratory or no one is familiar with the river, maps and guidebooks, if available, should be examined. The group should secure accurate flow information; the more difficult the run, the more important this will be. Be aware of possible changes in river level and how this will affect the difficulty of the run. If the trip involves tidal stretches, secure appropriate information on tides.

3. **Group equipment should be suited to the difficulty of the river.** The group should always have a throw-line available, and one line per boat is recommended on difficult runs. The list may include carabiners, prussic loops, first aid kit, flashlight, folding saw, fire starter, guidebooks, maps, food, extra clothing, and any other rescue or survival items suggested by conditions. Each item is not required on every run, and this list is not meant to be a substitute for good judgment.

4. **Keep the group compact** but maintain sufficient spacing to avoid collisions. If the group is large, consider dividing into smaller groups or using the “buddy system” as an additional safeguard. Space yourselves closely enough to permit good communication, but not so close as to interfere with one another in rapids.

    I. **A point paddler** sets the pace. When in front, do not get in over your head. Never run drops when you cannot see a clear route to the bottom or, for advanced paddlers, a sure route to the next eddy. When in doubt, stop and scout.

    II. **Keep track of all group members.** Each boat keeps the one behind it in sight, stopping if necessary. Know how many people are in your group and take headcounts regularly. No one should paddle ahead or walk out without first informing the group. Paddlers requiring additional support should stay at the center of a group, and not allow themselves to lag behind in the more difficult rapids. If the group is large and contains a wide range of abilities, a “sweep boat” may be designated to bring up the rear.

    III. **Courtesy.** On heavily used rivers, do not cut in front of a boater running a drop. Always look upstream before leaving eddies to run or play. Never enter a crowded drop or eddy when no room for you exists. Passing other groups in a rapid may be hazardous; it's often safer to wait upstream until the group ahead has passed.

5. **Float Plan.** If the trip is into a wilderness area or for an extended period, plans should be filed with a responsible person who will contact the authorities if you are overdue. It may be wise to establish checkpoints along the way where civilization could be contacted if necessary. Knowing the location of possible help and planning escape routes can speed rescue.

6. **Drugs.** The use of alcohol or mind-altering drugs before or during river trips is not recommended. It dulls reflexes, reduces decision-making ability, and may interfere with important survival reflexes.

7. **Instructional or commercially guided trips.** In contrast to the common adventure trip format, in these trip formats, a boating instructor or commercial guide assumes some of the responsibilities normally exercised by the group as a whole, as appropriate under the circumstances. These formats recognize that instructional or commercially guided trips may involve participants who lack significant experience in whitewater. However, as a participant acquires experience in whitewater, he or she takes on increasing responsibility for his or her own safety, in accordance with what he or she knows or should know as a result of that increased experience. Also, as in all trip formats, every participant must realize and assume the risks associated with the serious hazards of whitewater rivers.

8. It is advisable for instructors and commercial guides or their employers to acquire trip or personal liability insurance:

    I. An “instructional trip” is characterized by a clear teacher/pupil relationship, where the primary purpose of the trip is to teach boating skills, and which is conducted for a fee.

    II. A “commercially guided trip” is characterized by a licensed, professional guide conducting trips for a fee.

2.4 Guidelines for River Rescue

1. **Recover from an upset with an Eskimo roll** whenever possible. Evacuate your boat immediately if there is imminent danger of being trapped against rocks, brush, or any other kind of strainer.

2. **If you swim, hold on to your boat.** It has flotation and is easy for rescuers to spot. Get to the upstream end so that you cannot be crushed between a rock and your boat by the force of the current. Persons with good balance may be able to climb on top of a swamped kayak or flipped raft and paddle to shore.

3. **Release your craft if this will improve your chances,** especially if the water is cold or dangerous rapids lie ahead. Actively attempt self-rescue whenever possible by swimming for safety. Be prepared to assist others who may come to your aid.

    I. When swimming in shallow or obstructed rapids, lie on your back with feet held high and pointed downstream. Do not attempt to stand in fast moving water; if your foot wedges on the bottom, fast water will push you under and keep you

there. Get to slow or very shallow water before attempting to stand or walk. Look ahead! Avoid possible pinning situations including undercut rocks, strainers, downed trees, holes, and other dangers by swimming away from them.

II. If the rapids are deep and powerful, roll over onto your stomach and swim aggressively for shore. Watch for eddies and slackwater and use them to get out of the current. Strong swimmers can affect a powerful upstream ferry and get to shore fast. If the shores are obstructed with strainers or undercut rocks, however, it is safer to "ride the rapid out" until a safer escape can be found.

4. **If others spill and swim, go after the boaters first.** Rescue boats and equipment only if this can be done safely. While participants are encouraged (but not obligated) to assist one another to the best of their ability, they should do so only if they can, in their judgment, do so safely. The first duty of a rescuer is not to compound the problem by becoming another victim.

5. **The use of rescue lines requires training;** uninformed use may cause injury. Never tie yourself into either end of a line without a reliable quick-release system. Have a knife handy to deal with unexpected entanglement. Learn to place set lines effectively, to throw accurately, to belay effectively, and to properly handle a rope thrown to you.

6. **When reviving a drowning victim,** be aware that cold water may greatly extend survival time underwater. Victims of hypothermia may have depressed vital signs, so they look and feel dead. Don't give up; continue CPR for as long as possible without compromising safety.

3 Safety, First Aid, and Rescue Equipment

For this study, volunteer boaters participating in the controlled flow releases are required to have the following PPE, regardless of skill level or experience:

- **Personal Floatation Device:** All study participants are required to wear a Type III or V personal floatation device when boating or within 10 feet of the water.

- **Helmet:** All study participants must wear a properly fitted whitewater helmet when boating.

- **Whistle:** All study participants must carry a whistle to alert other participants or spotters of an emergency situation or to signal distress.

- **Sturdy Footwear and Leg Coverings:** All study participants must wear sturdy, closed-toe footwear at put-in and take-out locations or when portaging or scouting rapids. Pants or other leg coverings are required at the put-in and take-out locations.

As noted in the Safety Code, ***it is the responsibility of the study participants to have the PPE, first aid, rescue, and other safety equipment that they determine to be***

appropriate. Participants should consider (both individually and as a group) the equipment that may be appropriate for weather conditions, flows, watercraft, and skill levels. Other appropriate PPE, first aid, rescue, and safety equipment may include (but is not limited to), wetsuits, drysuits, spraycovers, extra oars/paddles, gloves, throw ropes, rescue knives, floatation, first aid kits, and an extra set of dry clothes. It is the responsibility of study participants to have the PPE, safety, first aid, and rescue equipment available for the controlled flow releases and to be familiar with proper use of any such equipment.

4 Alcohol and Drug Policy

For the safety of all participants, and consistent with the Safety Code, the use of alcohol or drugs is prohibited during the controlled flow releases. Whitewater rafting requires exceptional physical exertion and risk of injury or death from whitewater rafting can be mitigated by excluding those under the influence of alcohol or drugs. As noted in the Safety Code, the use of alcohol or drug, dulls reflexes, reduces decision-making ability, and may interfere with important survival reflexes. ***Persons who appear visibly intoxicated will not be allowed to participate in the study.***

5 Safety Issues

Each volunteer boater is responsible for understanding the safety issues associated with participation in the study. In addition to the safety guidance discussed in the Safety Code, volunteer boaters should be aware of the following safety issues that may be encountered during the study:

- **Strainers and obstructions** along the Project's bypass reach that present potential pinning scenarios for boats and boaters, including downed trees, rocks/boulders, and bridge pilings.
- **Potential foot entrapments** that could result from dangling feet over or near the bottom of the river or attempting to stand in the current.
- **Weather related illness**, such as hypothermia or dehydration.
- **Severe or sudden weather events** (i.e., thunderstorms, heavy rainfall, etc.).
- **Sudden rapid flow releases** that may occur if the powerhouse is tripped offline (due to a lightning strike or equipment failure) or if water is released through the surge gate located upstream from the Projects E.L. Field Powerhouse.
- **Advice/encouragement from the general public** to attempt rivers or rapids which lie beyond the volunteer boater's ability.

- **Sudden changes in physical health or mental condition** of volunteer boater on the day of the study.

- **Hazardous materials** commonly found along the shoreline of many urban rivers, including broken glass, rusted metal, and used hypodermic needles.

- **Unexpected emergency situations** (i.e., medical/health emergency, boating collisions, etc.).

6 Safety Measures

Boott, the Working Group, and study participants will all have responsibilities to support safe boating during the controlled flow releases. The following safety measures will be implemented for this study:

- Volunteer boaters will be experienced and will have the skills necessary to boat the Project's bypass reach. AW will be responsible for selecting volunteers to participate in the controlled flow releases.

- The minimum age for participating in the controlled flow releases is 18. All participants will sign a waiver prior to boating the controlled flow releases. Individuals who do not sign the waiver will not be allowed to participate in the Whitewater Study.

- All study participants must adhere to the COVID-19 Protocols described in Section 7 of this Safety Plan. Boott reserves the right to remove any participant who does not adhere to the COVID-19 Protocols from the Whitewater Study.

- All study participants will be required to provide contact information for themselves and an emergency contact. Study participants will have the option to disclose medical conditions/disabilities that could be relevant to potential medical treatment/care (i.e., allergies to certain medications, asthma, etc.).

- Boott will maintain contact information for the City's fire department. The point of contact (POC) for the fire department shall be Joe Roth, Interim Fire Chief, 978-674-1217.

- At least 48 hours prior to boating the controlled flow releases, Boott will contact the City's fire department and any other contact designated by the City to make them aware of the timing and expected schedule for the controlled flow releases. If the fire department's POC has concerns regarding the timing or schedule for controlled flow releases, Boott will consult the working group to address any concerns. If the concerns cannot be addressed to the satisfaction of the fire department's POC, Boott reserves the right to postpone the study.

- Prior to boating the controlled flow releases, all study participants will participate in a daily "tailgate" safety discussion. During the tailgate discussion, Boott will summarize

the safety plan, including the procedures for emergencies. The tailgate discussion will be an opportunity for the Working Group to provide any additional or updated safety information to study participants, and for the volunteer boaters participating in the controlled flow releases to discuss conditions and any additional safety measures, recommendations, or guidance. Boott will document any new or modified safety measures, recommendations or guidance in the Safety Plan Addendum provided in Appendix A to this Safety Plan.

- Prior to boating the controlled flow releases, all study participants will participate in an equipment check to be sure that their gear is in proper functioning condition, all loads are secured so as not to break free and cause harm to fellow study participants, and that required PPE (i.e., vest, helmet, and whistle) are not damaged in a way that would inhibit them from working properly.

- Study participants will sign-in and sign-out on a daily basis and Boott will record the names of individual volunteer boaters as they put-in and take-out their craft.

- During the controlled flow releases, Boott will place “spotters” at two locations identified in the field in consultation with the Working Group. The spotters will observe boaters during the controlled flow releases and will be prepared to call emergency services (911) if there is an observed accident, injury, pinning, or other emergency.

- Boott, the Working Group, and study participants will continually evaluate boating safety and will speak with anyone whose actions on the water are dangerous.

- Study participants will make the decision to scout any rapid, and to run or portage according to their best judgment. Do not enter a rapid unless you are reasonably sure that you can run it safely or swim it without injury. Consistent with the Safety Code, it is the responsibility of individual study participants to decide whether to pass up any walk-out or take-out opportunity.

- A “sweep boat” will be designated for each controlled flow release to ensure all study participants have safely exited the water.

- Study participants should avoid touching or handling any hazardous materials observed along the shoreline, including broken glass, rusted metal, or used hypodermic needles. Sturdy, closed-toe footwear should be worn at put-in and take-out locations or when portaging or scouting rapids.

- Any study participant should call 911 to report life-threatening or medical emergencies (i.e., chest pains) during the controlled flow releases. When calling 911, briefly describe the incident you are reporting to the dispatcher, remain calm, speak clearly, and stay on the line.

- If a safety incident occurs during the controlled flow releases, and a rescue is required, Boott will notify Project operations staff. If the flow in the bypass reach can

safely be reduced to facilitate rescue, Project staff will reduce the flow as quickly as possible.

- Boott reserves the right to remove any participant from the Whitewater Study who does not follow the safety measures or is acting in an unsafe manner.

7 COVID-19 Protocols

COVID-19 is a new disease that presents hazards that must be considered and addressed as part of this Whitewater Study. Massachusetts Governor Charlie Baker declared a State of Emergency to Respond to COVID-19 on March 10, 2020, and the World Health Organization designated COVID-19 as a pandemic on March 11, 2020. On March 13, 2020, the President of the United States declared the COVID-19 pandemic a national emergency.

The Commonwealth of Massachusetts remains under an emergency declaration and has promulgated regulations and guidance to reduce the spread of COVID-19. The Commonwealth's regulations and guidance related to COVID-19 are available at https://www.mass.gov/info-details/covid-19-updates-and-information**.**

Boott notes that the Commonwealth's regulations and guidance are subject to change, and study participants must review the guidance and recommendations prior to arriving at the Project. It is the responsibility of each study participant to review and comply with the Commonwealth's regulations and guidance regarding COVID-19.

The spread of COVID-19 between humans most likely occurs when a person is within six feet of an infected person. Sources of exposure to COVID-19 include droplets of respiratory secretions produced when an infected person coughs or sneezes; these droplets are believed to enter the mouths and noses of people nearby and can be inhaled into the nose and lungs. Exposure can also occur by touching surfaces/objects contaminated with the virus (SARS-COV-2) that causes the disease and then touching the mouth, nose, or possibly the eyes. Activities that involve close (within six feet) contact with infected people or other sources of the virus, social conditions (i.e., high population density, frequent person-to-person contact, large group gatherings), or travel to areas highly affected by COVID-19 are risk factors for exposure to the virus. (OSHA 2020)

Hazards associated with exposure to the virus include developing COVID-19 illness, which has a wide range of symptoms ranging from mild to severe illness, and, in some cases, death. Symptoms may appear 2-14 days after exposure to the virus. People at higher risk for severe illness include older adults, people with severe underlying medical conditions (i.e., heart or lung disease, liver disease), people with asthma, and/or people that are immunocompromised.

The following COVID-19 protocols to prevent or reduce the likelihood of exposure to the virus will be implemented during the Whitewater Study:

- The Commonwealth of Massachusetts has issued a COVID-19 Travel Order, effective August 1, 2020. The Travel Order requires visitors and Massachusetts residents returning from certain states to complete the Massachusetts Travel Form and self-quarantine (or produce a negative COVID-19 test result that has been administered up to 72 hours prior to arrival in Massachusetts). ***It is the responsibility of each study participant to review and comply with the Commonwealth's COVID-19 Travel Order.*** Failure to comply may result in fines or legal action by the Commonwealth.

- For the safety of staff, contractors, study volunteers, and the public, Boott is implementing a COVID-19 screening for study participants. ***Participants must complete the COVID-19 Screening Form in Appendix B of this Safety Plan and email an electronic copy of the completed form to Kevin Webb with Boott at kwebb@centralriverspower.com. The completed COVID-19 Screening Form must be emailed the day before the controlled flow releases are scheduled to begin***. Persons who do not complete the form or who answer any of the screening questions in the affirmative will not be allowed to participate in the Whitewater Study.

- When arriving at the Project, all study participants will have their temperature screened. Temperature screening will be conducted by Boott using a non-contact thermometer. Study participants exhibiting a temperature of 100.4 degrees Fahrenheit or higher will not be allowed to participate in the study.

- Study participants will maintain a minimum of six feet of social distance during the Whitewater Study, including tailgate safety meetings. If appropriate social distancing cannot be maintained, use of a face covering is required.

- It is the responsibility of each study participant to have the appropriate PPE to prevent or reduce the likelihood of exposure to COVID-19. This PPE includes a face covering and hand sanitizer and/or sanitizing wipes.

- To prevent or reduce the likelihood of exposure to COVID-19, the following hygienic practices will be followed by all study participants:

  - Wash hands regularly and thoroughly with soap and water, for a minimum of 20 seconds. Hand sanitizer (containing at least 60 percent alcohol) may be used if soap and water is not available;
  - Avoid touching your nose, mouth, and eyes and sanitize hands before and after eating;
  - Cover coughs and sneezes with a tissue, or cough and sneeze into upper sleeve if tissues are not available;
  - Properly dispose of tissues immediately after use (do not place used tissues in clothing pockets);

  - Wash hands or use hand sanitizer after coughing, sneezing or blowing your nose;
  - Wipe-down frequently touched surfaces and equipment with sanitizing wipes;
  - Use disposable gloves if handling equipment that may be contaminated;
  - Avoid using or sharing other's equipment;
  - Avoid handshakes and direct physical contact with others; and
  - Always wash/sanitize hands after physical contact with others.

- ***To reduce overall exposure, one-person crafts (i.e., kayaks) are recommended for use during the controlled flow releases.*** If a multi-person craft is used, the total number of volunteer boaters on the craft should not exceed the minimum crew size necessary to safely operate the craft, and all volunteer boaters should be separated as far as possible.

- Boott will operate a shuttle system between put-in and take-out locations. Study participants will load/unload their own equipment. A maximum of two occupants will be permitted in each of the shuttle vehicles, including a driver and passenger. Passengers must ride in the back seat, and both the driver and passenger are required to wear a mask or face covering while in the vehicle. Frequently touched surfaces (i.e., door handle, seat belt, etc.) should be disinfected after every shuttle trip.

- Any study participant with signs or symptoms of COVID-19 must report symptoms to Boott and must leave the Project as soon as safely possible.

- Specific guidance from the State of Massachusetts regarding COVID-19, including requirements of any local, state, and federal government directives and/or ordinances applicable to the study area will be reviewed prior to the study and implemented as necessary.

- Boott reserves the right to remove any participant from the Whitewater Study who does not follow the COVID-19 Protocols or who is acting in an unsafe manner.

8 Contact Information

Contact information for emergency services, law enforcement, and Boott personnel are provided below. ***In the event of a life-threatening or medical emergency, call 911.***

Safety Plan Addendum

Record any revisions to the Whitewater Boating and Access Study Safety Plan in the table below. Revisions must be communicated to all study participants.

Revision	Reason	Revised By	Date

Appendix B
COVID-19 Screening Form

Lowell Hydroelectric Project
Whitewater Boating and Access Study Safety Plan

COVID-19 Screening Form

Please read each question in the table below carefully and circle the answer that applies to you.

1. Within the past 14 days, have you, or anyone in your household, been in close physical contact (6 feet or closer for at least 15 minutes) with a person who is known to have laboratory-confirmed COVID-19 or with anyone who has any symptoms consistent with COVID-19?	YES	NO
2. To the best of your knowledge, have you, or anyone in your household, been in close contact with a person that is in the process of being tested for COVID-19?	YES	NO
3. Are you, or anyone in your household, currently waiting on the results of a COVID-19 test?	YES	NO
4. Have you, or anyone in your household, experienced any of the following symptoms in the past 72 hours: • fever (over 100.4 degrees Fahrenheit) or chills • cough • shortness of breath or difficulty breathing • fatigue • muscle or body aches • headache • new loss of taste or smell • sore throat • congestion or runny nose • nausea or vomiting • diarrhea	YES	NO
5. Have you, or anyone in your household, traveled internationally, been on a cruise ship, or been to a state other than a lower-risk state designated by the Massachusetts Department of Public Health (*see* https://www.mass.gov/info-details/covid-19-travel-order) in the last 14 days?	YES	NO

Name Signature Date

A completed copy of this COVID-19 Screening Form must be emailed to Kevin Webb with Boott Hydropower, LLC at kwebb@centralriverspower.com the day before the controlled flow releases.

Lowell Hydroelectric Project (FERC No. 2790)
FERC Relicensing
Whitewater Boating Flow Pre-Run Survey

Lowell Hydroelectric Project Bypass Reach

Name: _____ **Affiliation:** _____

Home Zip Code: _____

E-Mail Address: _____

1) What whitewater crafts do you think are appropriate for this reach? (*Please choose all that apply*)
   a. Hard shell kayak / C1
   b. Inflatable kayak
   c. Open canoe with flotation
   d. Cataraft (include length)
   e. Self-bailing raft (include length)
   f. Stand-up paddleboard
   g. Other (please list)

2) What is your skill level?
   a. Novice (comfortable running Class II whitewater)
   b. Intermediate (comfortable running Class III whitewater)
   c. Advanced (comfortable running Class IV whitewater)
   d. Expert (comfortable running Class V whitewater

3) How many years have you been whitewater boating?

4) Over the past 3 years, approximately how many days per month did you whitewater boat?

5) Have you ever participated in a whitewater boating study associated with the relicensing of a hydroelectric project?

   a. _Yes No
   b. If yes, when, and for which project(s)?

6) How many times have you boated this reach before today?

   a. If you have boated this reach before, what were the flows?

      i. Approximately: cfs to: cfs
      ii. What type of craft did you use? (*Please choose all that apply*)
         1. Hard shell kayak / C1
         2. Inflatable kayak
         3. Open canoe with flotation
         4. Cataraft (include length)
         5. Self-bailing raft (include length)
         6. Stand-up paddleboard
         7. Other (please list)

Thank You for Your Participation

FERC Relicensing
Whitewater Boating Flow Post-Run Survey

Lowell Hydroelectric Project Bypass Reach

Name: _____ **Date of Run:** _____

Flow: _____**cfs**

1) What type of craft did you use for this run?
    a. Hard shell kayak / C1
    b. Inflatable kayak
    c. Open canoe with flotation
    d. Cataraft (include length)
    e. Self-bailing raft (include length)
    f. Stand-up paddleboard
    g. Other (please list)

2) Please identify the put-in and take-out locations you used for this run.

Put-in location: _____ Time: _____

Take-out location: _____ Time: _____

3) Please estimate the number of unintended hits, stops, boat drags, and portages you had on this run:
    a. I accidently hit rocks or other obstacles (but did not stop) about_times.

    b. I was stopped after hitting rocks or other obstacles about_times (but did not have to get out of my boat to continue downstream).

    c. I had to get out to drag or pull my boat off rocks or other obstacles about _____ times.

    d. I had to portage around rapids or sections about_times.

4) How many rapids and play spots did you experience at this flow?

   a. _Rapids Play Spots

5) Please evaluate the availability of the following factors at this flow.

	Totally Unacceptable	Unacceptable	Neutral	Acceptable	Totally Acceptable
Navigability	1	2	3	4	5
Challenging Technical Boating	1	2	3	4	5
Powerful Hydraulics	1	2	3	4	5
Whitewater "Play Areas"	1	2	3	4	5
Size/Difficulty of Rapids	1	2	3	4	5
Overall Whitewater	1	2	3	4	5
Challenge	1	2	3	4	5
Safety	1	2	3	4	5

6) At this flow, what minimum skill level would a paddler need to be to safely paddle this reach?
   a. Beginner
   b. Novice
   c. Intermediate
   d. Advanced
   e. Expert

7) Are you likely to return for future boating if this flow were to be provided or available?
   a. Definitely no
   b. Possibly
   c. Probably
   e. Definitely yes

8) Was this flow optimal, or would you prefer a flow that was higher or lower than this flow?
   a. Much lower
   b. Lower
   c. About the same (this flow was optimal)
   d. Higher
   e. Much higher

9) If you feel qualified to offer an opinion of the desirability of this run at this flow using different types of crafts, please respond to the following statements.

This run at this flow would work well for:	Strongly Disagree	Disagree	No Opinion	Agree	Strongly Agree
Hard shell kayaks / C1	1	2	3	4	5
Inflatable kayaks	1	2	3	4	5
Open canoes with floatation	1	2	3	4	5
Catarafts	1	2	3	4	5
Self-bailing rafts	1	2	3	4	5
Stand-up paddleboards	1	2	3	4	5
Other (Please specify):	1	2	3	4	5

10) Did you observe or experience any significant safety issues on your run (e.g., swims, pins, wrapped boats, constructed or natural river features, etc.)? Please explain.

11) Please use the space below to provide any other comments about your boating experience at this flow.

1) Craft used?
    a. Hard shell kayak / C1
    b. Inflatable kayak
    c. Open canoe with flotation
    d. Cataraft (include length)
    e. Self-bailing raft (include length)
    f. Stand-up paddleboard
    g. Other (please list)

2) What is your skill level?
    a. Novice (comfortable running Class II whitewater)
    b. Intermediate (comfortable running Class III whitewater)
    c. Advanced (comfortable running Class IV whitewater)
    d. Expert (comfortable running Class V whitewater

3) Which study dates/flows did you participate in? Please select from the list below.

Study Flows	Study Date	Participated	Did Not Participate
cfs			
cfs			
cfs			

4) Approximately how many times have you boated this reach before this study?

5) A number of factors can affect your satisfaction with a whitewater trip. How important are each of these factors to you?

	Not Important		Somewhat Important		Very Important
Navigability	1	2	3	4	5
Challenging Technical Boating	1	2	3	4	5
Powerful Hydraulics	1	2	3	4	5
Whitewater "Play Areas"	1	2	3	4	5
Size/Difficulty of Rapids	1	2	3	4	5
Overall Whitewater Challenge	1	2	3	4	5
Safety	1	2	3	4	5
Crowding	1	2	3	4	5
Long Run(s)	1	2	3	4	5
Short Run(s)	1	2	3	4	5
Low Number of Portages	1	2	3	4	5
High Number of Rapids	1	2	3	4	5
Low Number of Rapids	1	2	3	4	5
Easy Access	1	2	3	4	5
Easy Shuttles	1	2	3	4	5

6) Please evaluate the study flows for your craft and skill level. In making your evaluations, please consider all the flow-dependent characteristics that contribute to a high-quality trip (*note, please evaluate only the study flows that you participated in*).

	cfs	cfs	cfs
Totally Acceptable	5	5	5
Acceptable	4	4	4
Marginal	3	3	3
Unacceptable	2	2	2
Totally Unacceptable	1	1	1

7) Which of the following best describes your desired paddling experience (s) for this reach (*Note, you may select more than one)*:

Type of Experience	Description	Desired Experience	
Technical	I am interested in "technical" whitewater trips at relatively low flows	Yes	No
Standard	I am interested in "standard" whitewater trips at relatively moderate flows	Yes	No
High Challenge	I am interested in "high challenge" whitewater trips at relatively high flows	Yes	No

8) Based on the boating trips that you participated in for this study, please specify the flow(s) that, in your opinion, provide the following for your desired experience(s) *(note you can specify flows that you have not seen, but which you think would provide the following for your desired experience[s]).* Please list craft, desired experience (from Question 7), and related acceptable flow. If providing input on more than one craft or type of experience, please use the back of this form.

a. What is the minimum flow needed to boat this reach in your craft?

iii. Craft: Experience: Flow:_____cfs

b. Based on your skill level, factors that affect your satisfaction with a whitewater trip, and the flow-dependent characteristics of this reach, what is the minimum acceptable flow for this reach (the lowest flow at which you would return to paddle it)?

iv. Craft: Experience:__Flow:_____cfs

c. What is the optimal range of flows that provides the best whitewater characteristics for this run?

v. Craft: Experience: Flow: cfs to:___cfs

d. What is the highest safe flow for your craft and skill level?

vi. Craft: Experience: Flow:_____cfs

9) Please evaluate the acceptability of current river access for your craft and skill level, assuming that no shuttle(s) are available:

	Put In	Take Out
Totally Acceptable	5	5
Acceptable	4	4
Marginal	3	3
Unacceptable	2	2
Totally Unacceptable	1	1

10) Where would you prefer to put in to and take out of this reach if suitable parking and river access were available at that location, and what type of access facilities would facilitate a high-quality paddling experience?

a. Put In Location: _____ Facilities: _____

b. Take Out Location: _____ Facilities: _____

11) In your experience, what whitewater reaches in the region do you find similar to this one at your optimum flow for this reach? Also, please select how often you boat these reaches.

b. Whitewater reach name or description: _____
   i. Trips per Year: 0-3 4-8 9-15 15+

c. Whitewater reach name or description: _____
   i. Trips per Year: 0-3 4-8 9-15 15+

d. Whitewater reach name or description: _____
   i. Trips per Year: 0-3 4-8 9-15 15+

Hello Ms. Iffert,

Thanks for your email. You are correct that the Lowell Hydroelectric Project ("Project") referenced in your email below is located outside New Hampshire's coastal zone. As a result, the proposed relicensing of the Project is not subject to Coastal Zone Management Act federal consistency review by the New Hampshire Coastal Program.

Please feel free to contact me should you have any further questions.

Regards,

Christian Williams|Program Coordinator

Subject: Lowell Hydroelectric Project - Coastal Zone Determination

EXTERNAL: Do not open attachments or click on links unless you recognize and trust the sender.

Good morning,

Boott Hydropower, LLC (Boott), owns and operates the Lowell Hydroelectric Project ("Project" or "Lowell Project"), located at river mile 41 on the Merrimack River within the City of Lowell, Massachusetts, and with a project boundary extending upstream into New Hampshire. Boott operates the Project under a license from the Federal Energy Regulatory

Commission (FERC or Commission). The Project's existing license expired on April 30, 2023. Boott is pursuing a new license for the Project using the Commission's Integrated Licensing Process as defined in 18 Code of Federal Regulations (C.F.R.) Part 5. In accordance with the applicable regulations at 18 C.F.R. § 5.17(a), Boott filed with the Commission a Pre-Application Document (PAD) in 2018, and a Final License Application (FLA) on April 30, 2021. The FLA can be downloaded here: https://elibrary.ferc.gov/eLibrary/filedownload?fileid=020D18AB-66E2-5005-8110-C31FAFC91712

In preparing the PAD, Boott reached out to your offices in 2018 for a determination as to whether the Project was located in the state's coastal zone and requires a federal consistency review, but did not receive a response. Given that the Project is not located within the state's coastal zone, and as a run-of-river facility has no reasonably foreseeable adverse effects on the state's coastal zone, Boott does not believe the Project requires a federal consistency review. Location maps of the Project and your state's coastal zone are attached for reference.

Boott is seeking your determination by May 15, 2023 as to whether the relicensing of the Project requires a federal consistency review. In the meantime, let us know if require more information.

Kelsey Scott Iffert, MS
Environmental/Regulatory Section Lead

Subject: Lowell Hydroelectric Project - Coastal Zone Determination
Attachments: MA Coastal Zone Project Map.pdf

Good morning,

Boott Hydropower, LLC (Boott), owns and operates the Lowell Hydroelectric Project ("Project" or "Lowell Project"), located at river mile 41 on the Merrimack River within the City of Lowell, Massachusetts. Boott operates the Project under a license from the Federal Energy Regulatory Commission (FERC or Commission). The Project's existing license expired on April 30, 2023. Boott is pursuing a new license for the Project using the Commission's Integrated Licensing Process as defined in 18 Code of Federal Regulations (C.F.R.) Part 5. In accordance with the applicable regulations at 18 C.F.R. § 5.17(a), Boott filed with the Commission a Pre-Application Document (PAD) in 2018, and a Final License Application (FLA) on April 30, 2021. The FLA can be downloaded here: https://elibrary.ferc.gov/eLibrary/filedownload?fileid=020D18AB-66E2-5005-8110-C31FAFC91712

In preparing the PAD, Boott reached out to your offices in 2018 for a determination as to whether the Project was located in the state's coastal zone and requires a federal consistency review, but did not receive a response. Given that the Project is not located within the state's coastal zone, and as a run-of-river facility has no reasonably foreseeable adverse effects on the state's coastal zone, Boott does not believe the Project requires a federal consistency review. Location maps of the Project and your state's coastal zone are attached for reference.

Boott is seeking your determination by May 15, 2023 as to whether the relicensing of the Project requires a federal consistency review. In the meantime, let us know if require more information.

Re: CZM Federal Consistency Review of the Lowell Hydroelectric Project; Lowell.

Dear Mr. Gibson:

The Massachusetts Office of Coastal Zone Management received your request for a determination on location within the MA coastal zone on January 23, 2025, concerning the project referenced above.

The activities associated with this project fall outside the geographical boundaries of the Massachusetts Coastal Zone as delineated in Chapter 5: Massachusetts Coastal Regions and An Atlas of Resources, 1 June 1977 and further described in the Massachusetts Office of Coastal Zone Management Policy Guide and therefore are not subject to federal consistency review by this office at this time.

Thank you for submitting the information to CZM. If you have any questions regarding the CZM review process, please feel free to reach me at Sean.Duffey@mass.gov

Sincerely,

Sean Duffey
Project Review Coordinator
